

[1101-2N-db] - HW2 作業說明 2021/10/27

P0.心得甘苦談

我個人認為，進度還是太快了，有很多東西還是不熟悉甚至不理解，相信班上大多數人也是這樣覺得，而且期中作業又有點太過困難了。

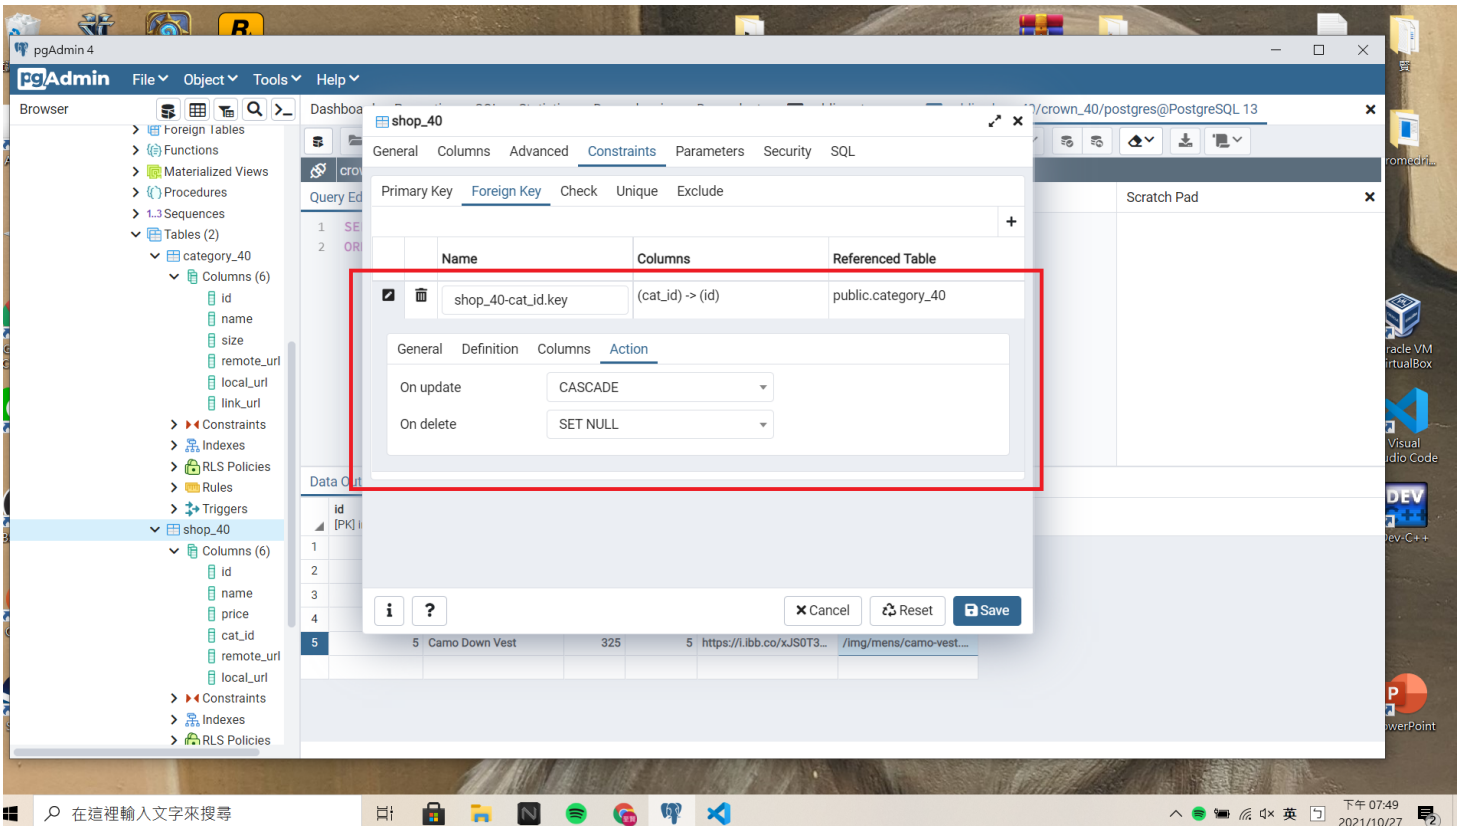

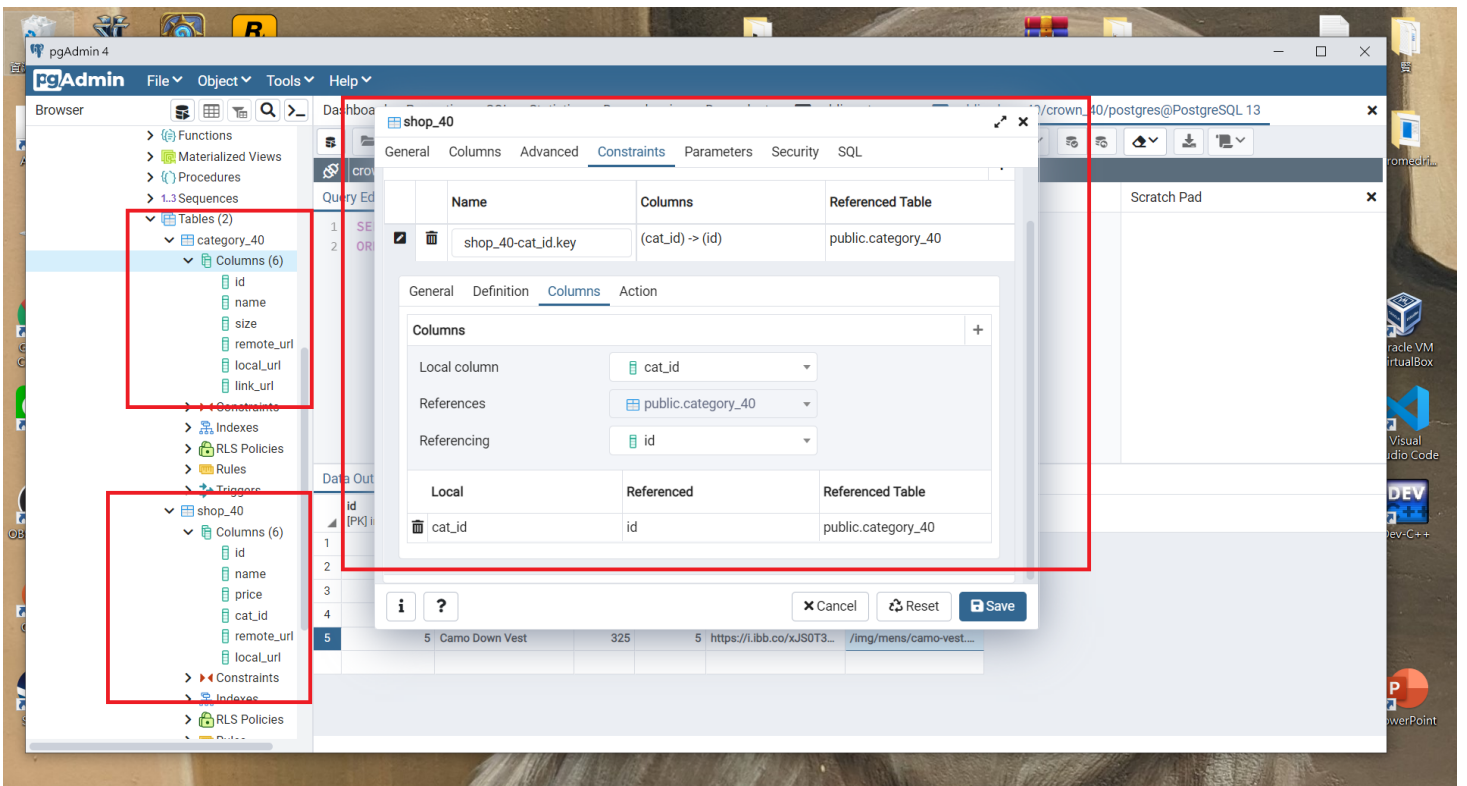

P1. 產生一個 table, shop_xx，欄位 id, name, price, cat_id, remote_url, local_url，每一個 category 輸入一筆資料

The screenshot shows the pgAdmin 4 interface. On the left, the 'Browser' pane displays the database structure, with 'shop_40' selected under 'public'. The main window shows the 'Query Editor' with a query: `SELECT * FROM public.shop_40 ORDER BY id ASC`. Below the query editor, the 'Data Output' tab displays the table data:

id	name	price	cat_id	remote_url	local_url
1	Brown Brim	25	1	https://i.lib.co/ZYW3VT...	/img/hats/brown-brim.p...
2	Tan Trench	185	2	https://i.lib.co/M6hHc3...	/img/jackets/brown-tre...
3	Adidas Yeezy	280	3	https://i.lib.co/dJbG1c...	/img/sneakers/yeezy.png
4	Yellow Track Suite	135	4	https://i.lib.co/v1cwNf...	/img/womens/yellow-tr...
5	Camo Down Vest	325	5	https://i.lib.co/xJS0T3...	/img/mens/camo-vest...

P2. 產生一個 foreign key, 將 shop_xx當中的 cat_id 連結到 category_xx 的 id, Update 設定為 Cascading, Delete 設定為 set null。

P3. 為你的期中project 產生一個 Github private repo，請提供老師Github private repo URL，並分享給老師(htchung)及助教(jerry7657)。

Github
